Re: Letter of Recommendation for Jan Kühn

I am writing this letter in support of Jan Kühn's application for full Professorship in algebra at the Palacky University. As a researcher in areas of algebra that are closely related to the work of Jan, I can offer the following comments on his research output to date. Jan has a substantial number of publications which range over a variety of topics within the general fields of lattice-based algebraic structures and algebras related to logic. The publications have appeared in well-regarded journals and some in top-ranked journals (such as Journal of Algebra, Algebra Universalis, Order). The contributions within the publications are significant studies into various subjects and bring new and original results to these subjects. I have had occasion to read a few of Jan's papers in depth and found them to be well-written and of a high standard in terms of their mathematical content. In addition, Jan has co-authored two books. In my opinion, Jan has established himself as an international expert within his areas of research and I strongly support his application.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'C. van Alten'.

Prof C. van Alten
