

Michal Otyepka

Scientific Writing

... a personal view

Apology

I planned discussion-oriented teaching concerning scientific publishing but due to the current situation with COVID pandemic I prepared this list of very useful links. You will find many useful information in webinars and videos.

How to write and publish your papers in high impact journals

Here is link to very recent webinar dealing with this topic: <https://www.aip.cz/seminare/432-how-to-write-and-publish-your-papers-in-high-impact-journals/>

I strongly agree that the cover letter (communication with the editorial office) is of particular importance especially in top journals, where the editors decline 80-90% manuscripts without sending them for peer-review

ACS Publishing your research

The American Chemical Society put together set of videos covering questions related to scientific publishing (manuscript writing, authorship, ethical issues, peer-review process etc.), they are more then worth to watch

A Scientific Approach to Scientific Writing

 Springer

Books

There are many books dealing with “scientific writing” I like this one, which I have a privilege to comment on in the process of its writing. There are many useful tips.
