

Installation

**** For Windows users – Installer (recommended)**

1. Download and run the Installer (this will install both Correland and Matlab Runtime 2019a in a single step).
2. Correland will be installed in the Program Files directory.
3. Run the application using Correland.exe (shortcut may not work, see fix bellow).

**** For Windows users – Portable**

1. Download the package containing the folder with Correland.exe.
2. If Matlab Runtime 2019a is not installed, download and install it separately.
3. Run Correland.exe.

**** Platform independent – Source (Matlab installed)**

1. Download the source code.
2. Run the file Kor.m.

IMPORTANT:

Correland.exe must be run with administrator privileges.

The shortcut created during automatic installation may not work correctly. If this happens:

- a) Run Correland.exe directly, or
- b) Create a new shortcut manually, or
- c) Update the "Start in" field in the shortcut properties to:
Program Files\Correland\application
